DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Peterson et al. In column 1, lines 16-40, Peterson et al discloses that it is known in the art to use an engine control module to detect electrical conductivity by measuring ionization current at the spark plug electrodes. The current may be used to indicate, among other things, spark plug fouling, as noted in line 27.

Claims 27-30 and 33 are rejected under 35 U.S.C. 102(e) as being anticipated by Yamada et al. In column 22, line 55, through column 23, line 25, Yamada et al discloses switching from stratified combustion mode to homogeneous mode when fouled spark plugs are detected. Operation in homogeneous mode is disclosed to remove soot from the electrodes of the plugs.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/605,710

Art Unit: 3747

Claims 5, 19 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Peterson et al in view of Ruman et al. Ruman et al discloses in column 6, lines 26-59 that an engine control unit for an outboard motor may include an ionization detector which measures voltage across the spark plug electrodes. It would have been obvious to one with ordinary skill in the art at the time the invention was made to use the ionization measuring device of Peterson et al in an outboard motor to determine combustion conditions, as taught by Ruman et al.

Allowable Subject Matter

Claims 2, 3, 6-12, 20-24, 26, 31 and 32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 13-18 are allowed.

Conclusion

The ionization sensor system made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to T. M. Argenbright whose telephone number is 703-308-1955.

The examiner can normally be reached 6:30am-3:00pm M-Th and 6:30am-2:00pm alt. Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry C. Yuen can be reached on 703-308-1946. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
